MPORTS OF RAW MATERIALS. They Formed Nearly One-half of Our Total Imports in the Fiscal Year 1903.

Washington, Aug. 23.-The Department of Commerce and Labor, through its Bureau of Statistics, in a table just completed, shows that the total value of manufacturers' materials imported in the fiscal year 1903 vas \$489,471,667, and that this formed 47.73 per cent. of the total imports. In the preeding year the total value of manufacturers' materials imported was \$415,-000,000 and formed 46.14 per cent. of the total. In 1898 the total importation of manufacturers' materials was \$247,000,000 In raw materials the increase last year was practically \$50,000,000, the figures for 1902 being \$327,000,000, and those for 1903 \$375,000,000. In partly manufactured materials for use in manufacturing the inrease was \$23,000,000, the figures for 1902 being \$91,000,000, and those for 1903

\$114.000.000. In raw materials the principal increases were raw silk, about \$8,000,000; India rubber, \$6,000,000; wool, \$5,000,000; chemicals, nearly \$7,000,000; fibres, \$3,000,000; tin, \$4,000,000. and copper, over \$6,000,000.

In the partly manufactured materials, iron and steel were the principal factors of increase. The total importations of iron and steel in the last fiscal year were the largest in manufactured. largest in many years, aggregating over \$51,000,000 in value, as against \$27,000,000 in the preceding year; and a very large proportion of the iron and steel imports material for use in manufacturing. iron increased from \$3,000,000 to over 16,000,000; scrap iron from \$750,000 to over \$2,000,000; bar iron increased nearly \$1,000,000 and ingots, blooms, slabs, billets and bars of steel from \$3,500,000 to nearly

TRYING TO FORM A BROOM TRUST. The Promoters Secure Options on Plant in the Mohawk Valley.

AMSTERDAM, N. Y., Aug. 23.-The broom manufacturers of the Mohawk Valley, who some weeks ago gave options on their plants to New York promoters who are trying to form a broom manufacturers' combine, have been notified to go to New York the coming week, when the matter of organizing the trust will be fully considered. It is said that the promoters were more than encouraged by the number of manufacturers who set a price on their factories and expressed a willingness to form a combine. The money, in the neighborhood of seven millions, to buy the factories and float the combine comes from

Western banks.

Just what course the trust will adopt in the way of conducting the business if their contemplated project is a success is not known. It is believed, however, by some of the manufacturers that many of the smaller broom factories throughout the county will be closed up and the business carried on only by the larger concerns. It is understood that the promoters hope to conduct the business along lines similar to conduct the business along lines similar to those adopted by the United States Steel Corporation. The options were sent to a New York trust company, who presumably would act as the financial agents for the broom trust.

TEXAS COTTON CROP INJURED. Boll Weevil Said to Have Damaged It Fully 30 Per Cent.

AUSTIN, Tex., Aug. 23.-George H. Wal-Lipton, who met with a similar accident in Orange on Thursday night, is still in a on, statistician of the State Agricultural Department, says that the cotton boll weevil has made great inroads on the cotton crop during the last ten days, and that the present prospects indicate that the loss from that source will aggregate nearly mining man of Parral, this State, whose death was reported a few days ago and was published in the newspapers throughout Mexico and the United States, is alive and well, according to reliable information brought here to-day from his home. The 50 per cent. of the yield that was promised early in the season. According to reports ! received by him from all over the Texas cotton, belt the boll weevil is doing great damage in 85 counties, and there is hardly a county in which it has not appeared. The boll worm is also ravaging the cotton. New Obleans, Aug. 23.—The Texas Boll Weevil Commission is making a tour of the State, testing the plans proposed for the eradication of the evil. So far the commissioners are not impressed with the remereport of Alvarado's death arose out of the death of a mining man of similar name at

MINING CAMPS ARE BUSY NOW

MUCH GOLD COMING DOWN FROM ALASKAN FIELDS.

Renewed Interest in the Lease of Life of the Calumet and Heels .- F. A. Heinze Working the Famous Minnie Healey Mine in the Butte Copper District.

SEATTLE, Wash., Aug. 17 .- Shipments of gold dust from the placer mines of Koyukuk are large and frequent, coming out mostly by the way of Nome, where the banks are now in easy touch with the mines and are purchasing the dust freely, paying \$19 to \$20 an ounce, because of its fineness and purity. Two hundred ounces of this gold came down on the last steamer, consigned o the United States Assay office. Times in Koyukuk district are reported good and he miners are staying with their claims.

The Kobuk country is also turning out well, over 200 miners operating successfully along the Shunnack, Sunday Ruby, Portland, Turner and other tributary streams. The first discovery was made on Shinmack, which is located its entire length, together with its tributaries. It costs \$80 a ton to haul freight to this camp from Nome, and provis-

ions of all kinds are very high.

Work on the Council and Salmon River Railroad is progressing and five miles of track laid, ready for the rolling stock, which is already on the ground. The company constructing this railroad is employing 500 men and is pushing work energetically, hoping to complete twenty miles of track

of carrying 5,000 inches of water, is being

dug along Salmon River by D. F. Lane and others to handle dirt that pays from \$6 to \$30 gold to the cubic yard. It is said there is enough gravel to pay for the next forty ears' along the line of this canal. On No. 8, below, on Salmon River a dredger operating with good results, being the first of the kind introduced in the Name liggings. It is thought this machine will

revolutionize placer mining in this part of Alaska, and it is said that mining by this method can be reduced to the lowest possible Dust is now the circulating medium in the Tanana country, and it is said that most of it is coming from the Tanana and its numerous feeders. A more hopeful feeling

pervades the camp, now that the mines are yielding well and the country is in touch with the outside world. One mining plant brought up the river from Saint Michael, costing \$60,000, is now being placed for operaion, and other machinery is expected. LAKE SUPERIOR COPPER.

HOUGHTON, Mich., Aug. 19.-The starting f work on a shaft upon the Kearsarge lode by the Calumet and Hecla has renewed interest in the probable lease of life of this king among mines. Opinions are divided as to how long the Calumet conglomerate lode will last a the present rate of production, the minimum figure given being only ten years, while others estimate a probable life of twenty to thirty years. The conglomerate is not as rich in copper as it once was, but the decline in mineral contents per ton of rock stamped is not so great as returns in sounds of ingot copper per ton of rock crushed, as a somewhat closer selectreet police station was shot in the right tion of rock is now made, and material is going to the mill that would have been discarded twenty or even ten years ago. The man employed at 178 Worth street. Cahill improvements in machinery and processes is in the Hudson street hospital, and will enable all of the Lake mines to treat rock that formerly would have been worthless. probably recover. Bizsak was remanded Since James MacNaughton took charge of to the Tombs prison by Magistrate Hogan the property, a trifle more than two years ago, great economies have been effected in every direction, and although it takes more rock to make a ton of copper than formerly, the production is being maintained and is ecured with a smaller force than before, and at a materially lower cost.

While the Calumet and Hecla will probably never again pay dividends of \$10,000,000 They found Bizsak in the cellar, and had to knock him down to get a pistol and club in a single year, as was done in 1899, the earnings continue well into the millions annually and despite the heavy dividend disbursehome from the station, shortly after 1 ments, the surplus is growing rapidly. It is o'clock, he heard two pistol shots in Chat-probably felt by the management that it was ham Square, and a minute or so later found a tactical error to have divided the former mistake will be repeated in the future. All mines come to an end, and the Calumet

and Hecla cannot prove an exception. While it is not too early to discuss the ultimate extinction of its copper reserves, it is much too early to set a date for the funeral. The mine will become exhausted some day, but that time is a long distance in the future. At least 15 per cent, of the prolific ground opened has been allowed to remain unstoped. serving as pillars 75 feet wide on either side several places.

Bizsak appeared to be suffering from melancholia when arraigned in court. He sullenly answered the questions of the court clerk, and said that he had shot Cahill because the policeman seized him by the throat and assaulted him without provocation. He denied that he had discharged his pistel before Cahill partired. of each shaft. The pillars alone will furnish several years' normal production, at small cost, when the balance of the mine is stoped out. The Adventure mine, in Ontonagon county, has taken a new tack, eleven drilling machines and about seventy men having been laid off recently. This means tha drifting and crosscutting will be stopped. and mining work confined to sinking and stoping. Both the Adventure and Mass mines have proved very disappointing to their promoters, but it is as yet too early to pronounce either of them a failure. The Michigan mine is soon to enter the ranks of the producers. Of the four active! copper mines in Ontonagon county the Michigan was the first to resume work, but

will be the third to begin regular production. It is probable that better results will be cured through the policy of making haste slowly than could have been obtained by forcing the mine to production a year or two eargood of Newark and Joseph Schreiner of lier. The Victoria, which is the fourth of the Ontonagon county properties, is still a long way from beginning production, but has done an immense amount of work underground, and is completing the development of an exceptionally fine water power, which will not only operate the mines and mill but should have surplus power for sale to the Michigan mine or to manufacturing industries.

shoulder blade and bad cuts and bruises on the head. It is feared that the latter's skull may have been fractured.

Lockwood is superintendent of the Rubber and Celluloid Harness Trimming Company in Newark. His companion is also connected with the company.

While going down they tree declinity. Reports from the Warren district of Arizona are quite flattering of late, and fore-While going down the steep declivity of Hobart's Hill just outside of Summir, one of the rear wheels broke, causing the shadow the opening of several fine new copper mines by Lake district capital. The one of the real which around and turn over. Both men were thrown into a ditch full of water at the side of the road. It is thought alumet and Pittsburg is practically a proved nine already, and the present development company will probably be made over into a full-fledged mining corporation toward the close of the year. The Lake Superior and Pittsburg also has ore, but is handicapped by ORANGE TROLLEYS HURT MANY. a lawsuit, and present indications at the Higgins and Wolverine and Arizona proper-John Curtis, a Builder, Is Killed in a Fall ties are of much promise.

BUTTE, Aug. 17 -The noted Minnie Healey mine, the litigation over which between the Amalgamated Copper Company and F. A. Heinze has created wide interest and scanda is again being operated by Heinze. The District Court had decided that he was entitled to the property, but a few weeks ago the case was reversed on the ground of misconduct on the part of Judge E. W. Harney, the trial Judge, but according to the Heinze conten-tion the court sustained all the equitable contentions of the Heinze people and decided against the Amalgamated It is said also by Heinze's attorneys that the decision of the Supreme Court annulled the existing injunction and restored the controversy to its original phase With that view of it Heinze went to work in the property and now has 500 men employed taking out ore. The Minnie Healey ore is very rich and will yield from \$12 to \$14 a ton gross He is taking out about 500 tons day and will increase the output In the meantime the Amalgamated attor-

neys have petitioned Judge Harney to issue another injunction and prevent Heinze from working the mine during the pendency of the case in his court. The matter was se for hearing by Judge Harney several weeks ago, but without notifying the litigants or attorneys he left the city and the Amalgamated attorneys have been unable to locate him. The Supreme Court has adjourned until October, so that it will be imposssible o get another injunction hearing before that In the meantime Heinze is working

the Minnie Healey to its full capacity. Heinze's United Copper Company, in its annual report, made to the Montana tax authorities, said its average gross yield of ore last year was \$12.23 per ton. It was generally thought the valuation was low. but on that yield the company figured out its net earnings at \$601,250, which sum is subject to taxation. A tax expert in the employ of the county authorities discovered that there was a large discrepancy in the figures, and that the net earnings were \$242,000 more than had been reported. The tax authorities then raised the company's assessment accordingly. Mr. Heinze's attorney made a hard but unsuccessful fight to secure a reduction, and asserted that the gross yield per ton should have been \$11 only.

In Deer loade county, where the assessment of the Amalgamated company was increased about \$8,000,000 by the assessor, the company secured a reduction of more than \$6,000,000.

The Amalgamated smelter at Anaconda and the mines of the Anaconda, Parrot and Washoe companies in Butte, which have been shut down for nearly two months, are still inactive. No information is obtainable as to when operations will be resumed, but the general understanding is that it will not be before the middle of September.

A mining district that is likely to become a heavy producer of copper has been located in Jefferson county, near the town of Corbin. The mineral zone extends about three miles north and south and has a width of about two miles.

A big strike of gold has been made in the property of the Rose Gold Mining Company near Jefferson City. This company is composed of Providence and New York men, who, acquired the property some months ago. 'ne of the claims, the Yellow Jacket, has had a number of holes sunk on it and it was in one of these holes that the strike was made. The intention was to sink a shaft and at a depth of twenty feet one of the miners ran into the ore with his pick. The ore is a pocket, the extent of which has not been determined but it is said that at on of such ore would mean a fortune. The place where the strike was made on the Yellow Jacket is about one thousand feet from where the tunnel in the next claim, the New York, is being run to tap the ore body at a greater depth. subject to taxation. A tax expert in the employ of the county authorities discovered

John H. Hobbs of the La Luz Mines Company of Colorado Springs, is in the Guana-juato, Mexico, district, arranging to install a reduction mill of 200 tons initial daily caa reduction mili of 200 tons initial daily capacity.

The trouble with employees of the American Smeltin and Refining and United States Refining and Reduction companies has increased interest throughout the camp in independent mills. Recently several cyanide plants have been erected. All have proved successful. More will be built. The plants are generally from 50 to 100 tons daily capacity. They are conducted independently of either Mill or Smelter Trust.

LAKE REGION IRON MINES.

DULUTH, Minn. Aug. 19.—The purchase of all the iron ore interests of the Deering Harvester Company by the Internation Harvester Company by the Internation Harvester Company will probably be followed by the purchase of the Deering furnaces and bessemer plants at South Chicago. Three mines and two prospects were included in the purchase. Of the mines the Agnew and Hawkins are on the Mesabi range and the LaRue is near Baraboo, Wis.

At the Ploneer mine they are about to raise a shafthouse that is to be 168 feet high with an all steel frame and casing. The new engines are to run at the rate of 2,000 feet a minute and loads of five tons will be holsted. The main shaft is now down more than 1,000 feet. This mine has shipped so far this year 350,000 tons and during July it hoisted from its ore working shaft 75,000 tons.

Ore sales have been small in the past month LAKE REGION IRON MINES.

Ore sales have been small in the past month Ore sales have been small in the past month or two and furnacemen are waiting for the fall before deciding on what they will do.

The Higgins mine of the United States Steel Corporation will probably be reëntered at once and opened as a large stripping property. This step is made possible by the purchase of the adjoining McEwan by the corporation. McEwan is one of the properties secured in the great Chemung deal, concluded a few days ago, by which at least 70,000,000 tons of ore pass into the hands of the steel corporation.

NEVADA. NEVADA.

corporation.

NEVADA.

RENO, Aug. 18.—All mining men on this coast are watching with interest the pumping out of miles of tunnels and drift of the old Comstock lode at Virginia City. These mines were abandoned twenty years ago because the water flooded the lower levels and no engineer of that time could devise any means of relieving the works of the water which drove miners from rioh ledges. Above this water the diamond drill has been used to prospect most of the intermediate levels and only one strike was made. About \$6,000,000 was taken from the Consolidated Virginia mine, and the stock advanced from \$2 to \$50 inside of a week. In the old days when the mines were paying well this stock rose from \$10 to \$1,600 a share and paid \$10 a month dividends for over two years. The Comstock Mining Exchange in San Francisco has been practically dead for several years as none of the stocks have been quoted at over \$3 a share.

The great Reidler pumps that have been started on the work of draining the lower levels of the Consolidated Virginia and California mines are pouring out 4,500 gallons a minute. This great flow of water, which passes out through the Sutro tunnel, first runs a quartz mill near the mouth of the tunnel, and then it is seized by the farmers near by, who are utilizing it for irrigation.

A very rich strike was made last week in the Beehive claim of the Tonapah-Gold Mountain Company, at Tonopah At a depth of only ten feet from the surface a large deposit of free gold ore was found, assaying over \$30,000 to the ton. The place where this ore was struck is fully one mile from the company's tunnel. This strike has given a great impetus to prospecting in this vicinity.

San Francisco, Aug 17.—A D. Bonham,

impetus to prospecting in this vicinity.

CALIFORNIA.

SAN FRANCISCO, Aug. 17—A D. Bonham, who is a blacksmith of Chico, Butte county, has devoted his leisure time for several years to prospecting in the hills near his home. His friends joshed him about his fad and told him to let them in on any bonanza that he found. About thirty miles from Chico, in a secluded cafion, Bonham recently struck a quartz ledge so rich that the ore assays sto the pound. He has followed the ledge for ninety feet and it increases in width while apparently not lessening in value. He recently shipped 3,300 pounds of the ore to the Selby smelters and received a check for \$2,800. All the ore is taken up a steep mountain side on men's backs, as pack mules cannot be used.

A fifty-stain mill and cyanide plant is being installed at the Flamispunes mine, thirty miles north of Mojave, in Kern County. The company has enough good ore in sight to justify the receiting of the mill. The company is incorporated in New Jersey and is composed of New York and New Jersey capitalists. Alvin J Martin is general manager. CALIFORNIA.

The capacity of the De La Mar copper smelter at Bully Hill, Shasta county, will be doubled. The work of construction has already begun on another furnace. The output of copper from Shasta county next output of copper and the very large, as the Kesoutput of copper from Shasta county next year promises to be very large, as the Kes-wich and Bully Hill plants will both be running n full blast. The Indiana Dredging company is nego-The Indiana Dredging company is negofiating for a portion of the Jewish Cemetery

properties in Bingham, has been incorporated for \$2,000,000. The property consists of twenty-four claims, carrying lead, silver, gold and copper, the latter predominating.

twenty-four claims, carrying lead, silver, gold and copper, the latter predominating.

WASHINGTON.

SEATTLE, Aug. 17.—Since the bankers and business men of Seattle have taken an active and personal interest in the construction of an iron and steel plant with a capital of \$3,000,000, prospecting for iron ore has been greatly stimulated all along the Pacific Coast from Alaska to Mexico, with fair results. The best and largest deposit is found five miles from the sea coast in Lower California, fifty miles south of Ensenada, in a mine known as the San Ysedro. Conservative estimates made by reliable engineers, place the tonnage in sight at 20,000,000 tons, going 60 to 68 per cent. metallic iron, free from all impurities, and a strictly Bessemer iron. On Howe Sound, Vancouver Island, several deposits of high-grade iron ore have been found, and Washington, also, has several good veins on the Skagit and Cle-Elum rivers. Coking coal of the best quality, together with all the necessary fluxes, is in great abundance, near the city and close to tide water.

Reports are current that the Monte Cristo mine and smelter have been purchased by the Amalgamated Copper Company.

BRITISH COLUMBIA.

SEATTLE, Wash., Aug. 17.—On Texada Island considerable ore is being extracted from the leading properties, and a great deal of development work is under way. The shipments are made to the Crofton smelter on Vancouver Island, which has been running very successfully on local ores for several months past. The iron mines on Texada, owned by the Union Iron Works, San Francisco, and leased to the Irondale Iron Works, Washington, are shipping to the furnace at Irondale, where about thirty tons of pig iron are being produced daily.

The Kootenai, Great Western and Nickel Plate mines, in Roseland, all owned by an English syndicate, are being unwatered, after being idle for several years, with a view to extensive development and ore extraction. The Kootenai has been a good producer in the past, and much is expected of it, now that ore prices are good and the demand is increasing. BRITISH COLUMBIA. increasing.

ARIZONA.

PHŒNIX, Auz. 17.—One of the most sensational gold discoveries in the history of this Territory has been made near kingman, and the exciting frongier rushes following bonanza finds of the yellow metal interpretors, experts and tenderfeet, Miners prospectors, experts and tenderfeet have arrived by the score from California, Colonado, the Middle States, New York, and even from Bostod.

The presence of bonanza rock was determined by R. A. Gurley, an expert from Denver. He quietly returned to Denver and interested A. F. Judson, S. J. Sullivan and several other Denver mining men who accompanied him on his return to Kingman and the group filed notices on nearly 100 locations. The mad rush followed and all the ground within a radius of eight or ten miles was staked out hurriedly.

The new felds are located a few miles southwest of Kingman, in the broken foothills of the Cervat and Waliapai mountains. The gold is literally pure and worth a little more than \$20.50 an ounce. It is found free in stratified reefs of spar rocks and runs from \$10 to \$500 to the ton. It is said that there is \$20,000,000 in gold in the ore lying exposed on the surface of the great reefs on the original locations, It was believed that she valuable ground was all included in the original locations, but daily reports of rich finds indicate that some of the hundreds who have invaded the region after the cream was taken have been liberally rewarded for their search.

The claims located by the Denver men are being worked by night and day shifts, the owners being anxious to establish their rights to the claims at once. It is said to be the intention of the owners to install a big milling plant.

milling plant.

milling plant.

IN THE BLACK HILLS.

LEAD, S. D., Aug. 18.—The machinery has commenced to arrive for the large concentrating plant which is to be erected by the Tinton Tin Company at Tinton in the Bear Gulch district. The company is opening up a vein of tin bearing ore over 100 feet in width. The company is being financed by Chicago capitalists, and there is no question about the Black Hills being on the market with tin in the next twelve months.

There have been tin enthusiasts in the Black Hills for a good many years and attempts have been made to mine the ore at a profit, but they were not successful. The Tinton company treated 200 tons of the ore in Deadwood, and, it is stated, received an average of 7 per cent. per ton. This would be better than most of the gold bearing mines of the Black Hills.

OKLAHOMA.

GUTHRIE, Aug. 22.—Great excitement prevails at Lugert and Lone Wolf, in the Wichita Mountains, over the discovery of rich minerals at Devil's Gap, twelve miles south of Lone Wolf. It is reported that valuable ore in large quantities was recently unearthed. The fact, which became known yesterday was followed by an unprecedented rush of prospectors to the field. As the news of the discovery travelled the rush was augmented and now there are thousands in the field. It is asserted that out of eleven ounces of ore taken from the mines the assay shows about \$1 in copper and an equal amount of silver.

\$1 in copper and an equal amount of silver. MARINE INTELLIGENCE.
